- Worked on an **Instant Messaging Online Development Platform**
- A valuable web-based application that can connect individuals and groups in real time and provide a secure and reliable messaging platform.
- The platform enables users to create accounts, build a network of contacts, and send messages.

PROJECTS

SMTP using DJANGO framework
Developed a web application that allows users to send emails using the Simple Mail Transfer Protocol (SMTP) with the Django framework. SMTP is a protocol used for sending email messages between servers and is a crucial component of modern email communication. The programming languages and tools that are used include Python, Django, SMTP libraries, HTML, and CSS

Developed a Real time website (for SM AUTOMATION SOLUTIONS)
The website was developed using various programming languages and technologies, such as HTML, CSS, JavaScript, and Django framework, to ensure a high-quality and engaging user experience. It offers solutions in the field of automation and can assist businesses and individuals in streamlining their operations, enhancing productivity, and achieving their goals.
